VIII.4.7	Jumlah Penerimaan dan Pengeluaran Giro dan Cek Pos	395
VIII.4.8	Jumlah Pesawat televisi yang terdaftar melalui Kantor Pos dan Giro	396

in which :

- I_n = Monthly Index
 P_n = Price in month n
 P_{n-1} = Price in month $(n-1)$
 P_0 = Price in the base year
 Q_0 = Quantity in the base year

8. Regional Income

- a. The methodology for estimating the regional income follows the United Nation Guidance Book, adjusted to the Indonesian condition. There are three approaches for measuring gross regional domestic product (GRDP). They are : production, income and expenditure approaches. The production approaches is mostly used for measuring GRDP.
- b. Net regional domestic product (NRDP) is GRDP minus total depreciation of fixed capital goods utilized during one year.
- c. Net regional domestic product (NRDP) at factor cost is NRDP, at market prices minus net indirect taxes. The net regional domestic product at factor cost assumed same with net regional product or regional income.
- d. Per capita regional income is regional income divided by mid-year population.
- e. The per centation of regional income is distinguished into two forms : that is at current market prices and at constant base year market prices. In the per centation at current market prices, all product aggregates are valued at yearly current prices. In the per centation at base year constant market prices, all product aggregates are valued at fixed base year prices.
- f. Ordinary index is obtained by dividing the value corresponding to a certain year by base year value, multiplied by 100. This index shows year to year shifts in the level of product aggregates relative to base year value.
- g. Link index is obtained by dividing the value corresponding to a certain year by similar value in the preceding year, multiplied by 100. This index shows the growth rate of a product aggregates from one year to the next.
